## BT-200 BATTERY CABLE KITS

HEY, YOU GAVE ME TOO MANY PARTS!!!

- No, we're trying to help you.

We included both types of battery terminals, "Top Post" and "Side Lug". Use the ones you need. The spares make really good anchors for surf fishin'.

Use a knife to strip ¾" off the ends

Use a center punch to crimp – Get some aggression out here.

Punch down until you see copper in the dimple

Cover and shrink to seal.

‘You guys gave me 4 black shrink tubes, and 4 cable ends, I only need 2 each’ (what a waste)

- Hold on skippy, run one ground from the battery to the engine block. (like a bell housing bolt) then, with some extra cable (we give you a bunch) make a ground cable to run from the engine block over to the chassis. Thank us later when all your electrics work!
